

User Acceptance Testing Report - KaloriN AI (UAT)

Date Created: 18 June 2026

Document Information

Item	Details
Document Title	User Acceptance Testing (UAT) Report
Project Name	KaloriN AI
Application Type	Nutrition Tracking Web Application
UAT Type	Simulated User Acceptance Testing
Prepared By	Naufal Fadhiil
Role	QA Engineer
Date	June 2026
Version	1.0

1. Introduction

A. Background

KaloriN AI is a web-based nutrition tracking application that enables users to analyze food, track daily nutritional intake, receive personalized recommendations, and monitor weekly nutrition insights through AI-powered features.

Following the completion of functional testing, defect resolution, retesting, and regression testing, User Acceptance Testing (UAT) was conducted to validate that the application's primary business workflows meet expected user needs and can be completed successfully from an end-user perspective.

B. Purpose

The purpose of this UAT is to verify that users can successfully accomplish key business objectives using KaloriN AI and that the application is suitable for demonstration, academic presentation, and future development activities.

2. UAT Approach

Due to the academic and capstone nature of the project, formal client-side UAT was not available.

Therefore, a Simulated User Acceptance Testing approach was performed, where testing scenarios were executed from the perspective of representative end-users interacting with the application.

The focus of UAT was validating complete business workflows rather than individual feature functionality.

3. UAT Test Data

A. User Profile Data

Representative user profiles were used during UAT execution.

Persona	Weight	Height	Goal
User A	70 kg	175 cm	Maintain Weight
User B	85 kg	170 cm	Weight Loss
User C	55 kg	168 cm	Weight Gain

B. Food Analysis Test Data

Image data used during AI Scan during UAT execution.

Test Data ID	Food Item	Test Image	Expected Outcome
FD-001	Nasi Goreng		Food analysis displayed

FD-002	Bakso		Food analysis displayed
FD-003	Rendang Sapi		Food analysis displayed
FD-004	Ayam Goreng		Food analysis displayed

Note: Food scanner accuracy may vary depending on image quality, food presentation, lighting conditions, and dataset coverage.

4. UAT Scenarios

UAT ID	Business Flow	Status
UAT-001	User Registration Journey	Pass
UAT-002	User Login Journey	Pass
UAT-003	User Onboarding Journey	Pass
UAT-004	Food Search Journey	Pass
UAT-005	Food Scanner Journey	Pass
UAT-006	Meal Tracking Journey	Pass
UAT-007	Nutrition Recommendation Journey	Pass
UAT-008	Weekly Insight Journey	Pass
UAT-009	Profile Management Journey	Pass
UAT-010	User Logout Journey	Pass

UAT-001 - User Registration Journey

Business Objective: Users can create a new account successfully.

Acceptance Criteria

- User can access the registration page.
- User can enter required information.
- The account was created successfully.
- User can continue to login.

Test Steps

1. Open login page.
2. Enter valid email.
3. Enter valid password.
4. Click Login.

Expected Result

- Registration successful.
- User account created.
- User redirected to login page.

Status: Pass

UAT-002 - User Login Journey

Business Objective: Users can access the application using registered credentials.

Acceptance Criteria

- Login form accessible.
- Authentication successful.
- User redirected to Home page.

Test Steps

1. Open login page.
2. Enter valid email.
3. Enter valid password.
4. Click Login.

Expected Result

- Login successful.
- User enters application.

Status: Pass

UAT-003 - User Onboarding Journey

Business Objective: User can complete profile information required for nutrition calculation.

Acceptance Criteria

- User can enter body information.
- User can save onboarding forms.
- BMI and nutrition targets generated.

Test Steps

1. Complete onboarding form.
2. Enter birthdate.
3. Select gender.
4. Enter weight.
5. Enter height.
6. Select activity level.
7. Save profile.

Expected Result

- Data saved successfully.
- User profile generated.
- Nutrition calculation available

UAT-004 - Food Search Journey

Business Objective: Users can search food manually and view nutrition information.

Acceptance Criteria

- The search function works.
- Food information displayed.

- Nutrition data available.

Test Steps

1. Navigate to Analyze page.
2. Enter food keyword.
3. Select food item.

Expected Result

- Relevant food results displayed.
- Nutrition information shown correctly.

Status: Pass

UAT-005 - Food Scanner Journey

Business Objective: Users can scan food images and receive nutrition analysis.

Acceptance Criteria

- Image upload successful.
- AI scans & processes image.
- Analysis result displayed.

Test Steps

1. Navigate to Analyze page.
2. Upload food image.
3. Submit scan request.
4. Wait for analysis.

Expected Result

- AI identifies food.
- Nutrition analysis displayed.

Observations

The food scanner successfully analyzed several test images. However, recognition accuracy may vary depending on dataset coverage and image quality. Certain Indonesian foods may not always be identified consistently.

Status: Pass with Observation

UAT-006 - Meal Tracking Journey

Business Objective: Users can record consumed meals.

Acceptance Criteria

- User can add meal.
- Meal saved successfully.
- Daily nutrition progress updated.

Test Steps

1. Open meal detail.
2. Click Add Meal.
3. Save meal entry.

Expected Result

- Meal appears in tracking history.
- Progress updated automatically.

Status: Pass

UAT-007 - Nutrition Recommendation Journey

Business Objective: User receives personalized food recommendations.

.Acceptance Criteria

- Recommendation page accessible.
- Personalized recommendations generated.

Test Steps

1. Open Meals page.
2. View recommendations.

Expected Result

- Relevant recommendations displayed.

Status: Pass

UAT-008 - Weekly Insight Journey

Business Objective: Users can monitor nutrition progress through weekly insights.

.Acceptance Criteria

- Weekly summary generated.
- Nutrition trends displayed.

Test Steps

1. Open Insights page.
2. Review weekly summary.

Expected Result

- Insight data displayed correctly.

Status: Pass

UAT-009 - Profile Management Journey

Business Objective: Users can manage account and profile information.

.Acceptance Criteria

- User can update their profile.
- Updated data reflected throughout the application.

Test Steps

1. Open Profile page.
2. Edit profile information.
3. Save changes.

Expected Result

- Profile updated successfully.
- Changes displayed correctly.

Status: Pass

UAT-010 - User Logout Journey

Business Objective: Users can securely exit the application.

.Acceptance Criteria

- Logout option available.
- Session terminated successfully.

Test Steps

1. Open Profile page.
2. Click Sign Out.

Expected Result

- User logged out.
- Redirected to the login page.

Status: Pass

5. UAT Execution Summary

Metric	Result
Total UAT Scenarios	7
Executed	7
Passed	7
Failed	0
Pass Rate	100%

6. UAT Findings

A. Positive Findings

- Users can successfully complete all primary business workflows.
- Authentication and onboarding flows operate correctly.
- Meal tracking and recommendation features function as expected.
- Weekly insights provide meaningful nutritional information.
- Profile management functions correctly after defect fixes.

B. Improvement Opportunities

- AI Scanner recognition accuracy can be improved by expanding and refining the food image dataset, particularly for Indonesian cuisine.
- Additional sample food images may improve user understanding of supported food categories.

7. UAT Conclusion

All planned User Acceptance Testing scenarios were completed successfully and met the defined acceptance criteria.

The application successfully supports its primary business objectives, including user onboarding, food analysis, meal tracking, personalized recommendations, and nutrition insights.

Based on the results of User Acceptance Testing, KaloriN AI is considered acceptable for academic demonstration, capstone presentation, and future development activities.

8. UAT Sign-Off

Role	Name	Status
------	------	--------

QA Engineer	Naufal Fadhiil	Approved
Full Stack Developer	Muh Caesar Astra Kusmalika Reyhand	Approved
